An information about Schneider agricultural devices

## Sieve Buckets:

# ...for keeping soil

Our **sieve bucket** is ideal for keeping soil on the field. It **sifts medium and large stones without clogging**. Potatoes and turnips can also be loaded from headland or a soil heap without disturbing any soil.

The sieve bucket also **has an ideal scope when handling wet soil**. The soil is loaded and most of the water remains on the surface.

The device is also interesting for gardening and landscaping. It can be used to excavate paved paths easily and effectively while at the same time recovering the old paving stones. The effective cleaning and aeration of topsoil and play sand is also no problem.

## Technical Features / Advantages

- > thick-walled support tube
- > stable side plates
- > 20 mm round rods with a distance of 40 mm
- > resistant cutting edge of hardened steel 500 HB
- > additional protective runners at the bucket base
- > LP-bracket
