Rapid information for our customer

## Steel /stainless steel rear frames: Sealed with ease!

Our aluminium rear frame kits feature integrated seals to close the gap between the body and tail lift. Previously, seals **for steel and stainless steel frames** had to be fitted manually, which was a time-consuming process. **Factory-fitted seals** are now available for more efficient installation.

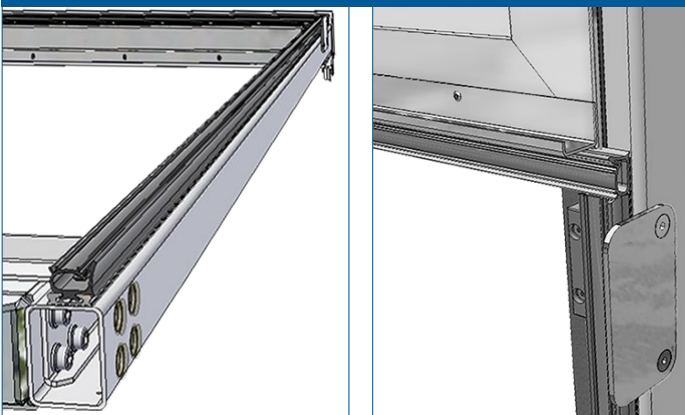

### High-quality EPDM sealing system

- > **high elastic recovery** over repeated opening cycles
- > resistant to UV light, ozone, cleaning agents, etc.
- > **remains flexible from - 40 °C to + 120 °C**
- > designed for a **24 mm application thickness**

### Pre-assembled for efficient production

- > the sealing system **includes a stop fitted at the lower end of the rear frame** for system integration
- > **shorter lead times**
- > time saved = **lower costs**
- > easy **seal replacement** in the aluminium profile during service
