

NEWS

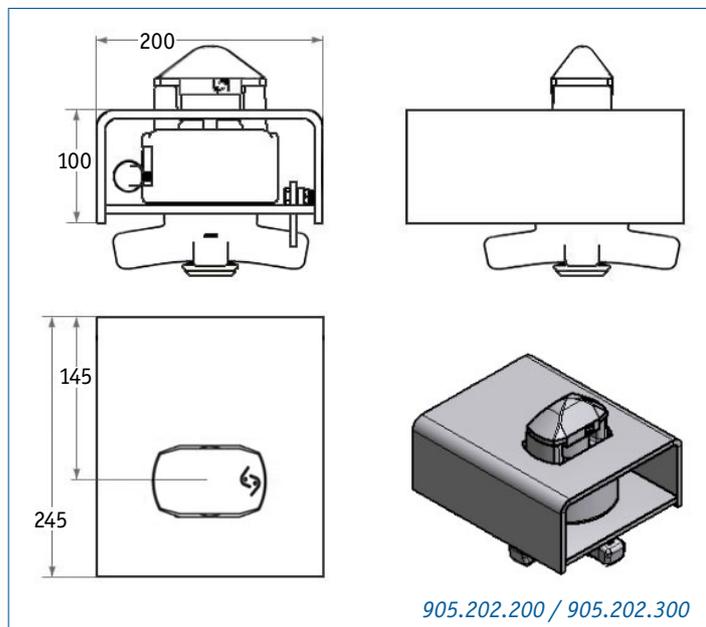

Rapid information for our customer.

**Twist lock
fully retractable:**

For Real Rounders

For all applications in which platform trailers also transport ISO containers, we recommend the twist locks [905.202.200](#) / [905.202.300](#) for flush welding.

The outer guide, which can be operated from the inside, makes it possible to provide the vehicle with a continuous outer frame. All our locks are available with galvanised

internal parts for **optimised protection against corrosion**. The housings are available raw for a classic paint finish and optionally hot-dip galvanised. **More information** on container technology can be found at www.schneider-fc.com.
