

Rapid information for our customer

## Swap Systems: Only 10 mm high

... is the system height of the **Schneider modular system for C782 swap bodies** with high interior height. The **WS volume kit** with flanged support arms enables efficient assembly and offers your customers many advantages.

- > the **support arms** do not rest on the chassis, but **are attached to the side of the longitudinal beams**
- > they are connected to each other for greater stability
- > the front stop reliably protects the cab
- > incl. **guide rollers**

- > **additional supports prevent contact** (abrasion of the paintwork) **between the swap body and the chassis**
- > **optional multi support beam** for MB Actros and MAN TGA
- > all components are **hot-dip galvanized** for optimum corrosion protection and a long service life

- > consistent screw technology for **high productivity**
- > easy repairs in case of damage
- > design in line with the **installation guidelines of the chassis manufacturers**
