BDF Swap Systems:

New Support Beam!

Some chassis, particularly those used for gas-powered and electric vehicles, provide only **limited space** for body installation. For the **WS Standard swap system, a newly developed, more compact support beam** is now available as an option.

For chassis with limited installation space

Art.-No. 411.610.181

- the rigid twist lock **eliminates the risk of contact with gas tanks or battery packs**
- **new cross-member** = less installation space
- **proven WS Standard** swap body system can now be fitted to a wider range of chassis without modification
- **reduced spare parts inventory** thanks to on standardised e.g clamping bolts and nuts
- **future-proof solution** for alternative drive systems or chassis with auxiliary units
